SUMMARY

Software (Backend) Engineer with 5+ years of experience designing scalable, high-impact web applications for healthtech, fintech, and agritech startups. Skilled in integrating LLMs, RAG pipelines, and AI agents into production systems. Adept at leveraging Python, Django, and AWS to deliver robust solutions, focusing on driving business growth and enhancing user experiences.

SKILLS

Languages, Frameworks & Libraries: Python, Django, Flask, FastAPI, SQL, HTML/CSS, JavaScript, Hugo, Numpy, Redis, Celery

Databases: PostgreSQL, MySQL, Redis, Neo4j

DevOps: Docker, Kubernetes, Terraform, AWS, Jenkins, GitHub Actions, Prometheus, Grafana, Pytest, Code Climate, Git, Nginx, Sentry

AI/ML: LLMs (GPT, Claude, Llama, Mistral), RAG, Fine-tuning (LoRA), AI Agents, LangChain, Hugging Face Transformers, Vector Databases (ChromaDB/Pinecone), Prompt Engineering

EXPERIENCE

Medfluencers Inc.

Senior Backend Engineer

Delaware, United States

February 2024 — February 2026

- Built an automated storyboard generator using Google Cloud Video Intelligence API that extracts frames and captions from social media reels, eliminating a manual screenshot-and-transcription workflow and reducing content production time by 70%.
- Engineered a Neo4j-based microservice with Graphistry visualisations and implemented a comprehensive monitoring stack with Prometheus and Grafana, enabling marketing teams to analyse influencer campaign reach while maintaining 99.9% service reliability.
- Developed an automated Fair Market Value (FMV) calculator to optimise compensation decisions for the account team.
- Implemented TikTok and Google authentication services, reducing user onboarding time by 15% and increasing conversion rates.
- Established team-wide linting standards and automated quality checks that reduced code review cycles by 20%.

Tech Stack: Python, Django, GitHub Actions, PyTest, PostgreSQL, Neo4j, Redis, Celery, Prometheus, Grafana, AWS, Docker

SunFi

Product (Backend) Engineer

Lagos, Nigeria

March 2022 — October 2024

- Led a team of backend developers, overseeing product discovery, code reviews, and the merge process to ensure code quality and delivery timelines.
- Architected and implemented a CI/CD pipeline with Jenkins that improved deployment efficiency by 60% and reduced production issues by 40%.
- Established a Prometheus/Grafana monitoring infrastructure that provided real-time visibility into system performance to identify performance bottlenecks.
- Designed a custom Role-Based Access Control (RBAC) system with Django, enhancing platform security.
- Integrated an automated loan repayment system with fintech partners that improved debt recovery by 70% through Celery-powered scheduling and retry mechanisms.
- Created a PaaS solution that enables renewable energy companies to seamlessly integrate with Odyssey's data reporting system, eliminating technical barriers and accelerating market entry for companies lacking internal technical capabilities.
- Built a solar savings calculator app that comprehensively analyses a user's expenditure on a generator compared to the potential savings when transitioning to solar power.

Tech Stack: Python, Django REST framework, PyTest, PostgreSQL, Redis, Celery, Jenkins, Docker, Prometheus, Grafana, AWS

Crop2Cash

Backend Engineer

Ibadan, Nigeria

January 2022 — July 2022

- Enhanced a customer relationship platform with real-time messaging capabilities that improved customer support efficiency for 10,000+ farmers.
- Resolved critical bugs in the USSD platform, improving functionality by 25% for field agents and farmers.

Tech Stack: Python, Django, Django REST framework, PyTest, PostgreSQL, Sentry, Heroku

EDUCATION

University of Ibadan, Nigeria

Master of Business Administration (Entrepreneurship and Operations Management)

Ibadan, Nigeria

April 2025 — November 2026

University of Ibadan, Nigeria

Bachelor of Science, Computer Science

Ibadan, Nigeria

August 2016 — July 2021

Relevant Coursework: Data Structures and Algorithms, Web Development, Database Systems, Software Engineering

PROJECTS

Porosdjango - an open-source CLI tool hosted on PyPI designed to enhance developer productivity by automating Django project setup.

Tech Stack: Python, Click, Jinja2

Pywhisperer - an AI-powered Django learning tool that generates personalised lessons tailored to users' interests using LLMs, making web development concepts more engaging and relatable.

Tech Stack: Python, Django, LangChain, React, OpenAI API
